Allowable Subject Matter

Claims 1-3, 6, 7 and 10-14 are allowed.

The following is an examiner's statement of reasons for allowance: Applicants amendments and arguments are persuasive.

Applicant amended claim 1 to overcome the Objection to the Specification.

Claim 1 deleted the term pitches now describes "there are 4 to 20 A yarns and then 1 B yarns and the distance between the B yarns is not longer than 7 mm".

Applicant amended claim 14 to overcome the 35 USC 112 1st and 2nd paragraph rejections over claim 14 recitation of "air permeability imparting". The claim describes an "air impermeability imparting" which is taught in the specification (PG Pub paragraph 0037).

Applicant amended claim 1 to describe "wherein the multifilament B yarn comprises polyester multifilaments and/or polyamide multifilaments". Applicant argues that the rejection of claims 1-3, 6, 7, 10, 12, 13 and 14 over Onodera in view of Akamatsu and states that Onodera teaches a woven fabric made from regenerated cellulose fiber (A) and that this corresponds to the multifilament B of the present invention. The range of cover factor depends on the regenerated cellulose system fiber and therefore the range of cover factor can not be compared with that of the present invention. Onodera does not teach or suggest replacing the regenerated cellulose fiber

Art Unit: 1798

with a multifilament of polyester or polyamide as claimed and in fact teaches away from a 100% synthetic yarn fabric and employs the regenerated cellulose to improve the feel of the fabric to that of cotton. In addition, the weight and density of the regenerated cellulose fiber would not be equivalent to a polyester or polyamide multifilament would not necessarily provide an equivalent cover factor nor fabric weight. The rejections over Onodera in view of Akamatsu and Onodera in view of Akamatsu and in further view of Hirakawa are withdrawn.

Applicant's arguments with respect to the rejection of claims 1-3, 6, 7 and 10-14 over Smith II in view of Hirakawa are persuasive because Smith III in view of Hirakawa do not teach or suggest the claimed features of the fineness of yarns A, A and B yarns in the claimed ratio, the cover factor and the basis weight of not higher than 45 gsm.

The prior art fails to teach or suggest the combination of a bag made of downproof fabric consisting essentially of a polyester multifilament yarn A fineness woven with a polyester or polyamide multifilament yarn B with 4-20 A yarns then 1 B yarn and the distance between the yarns is not longer than 7 mm wherein the yarns A have a single yarn fineness of not lower than 2.0 dtex and a total fineness of not higher than 25 dtex and the yarns B having a total fineness of not lower than 35 dtex.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1798

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
